

Install QGIS Long Term Release

Why LTR ? Short answer: its most stable while 'Latest Releases' may crash (more often).

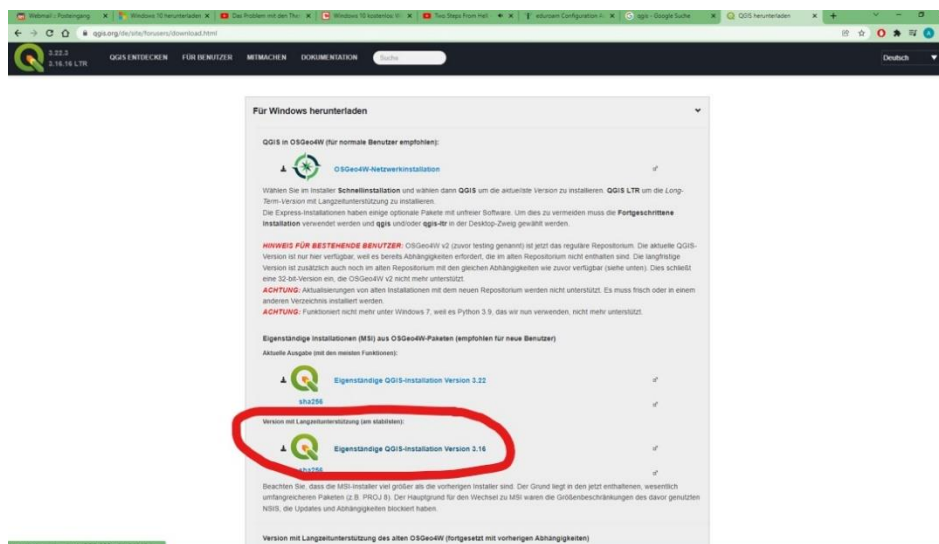

1. Download LTR version

Go to <https://www.qgis.org/de/site/>

Select "Jetzt herunterladen"

Select "Eigenständige QGIS- Installation"

The Download should start automatically.

Follow the instructions of the installer.

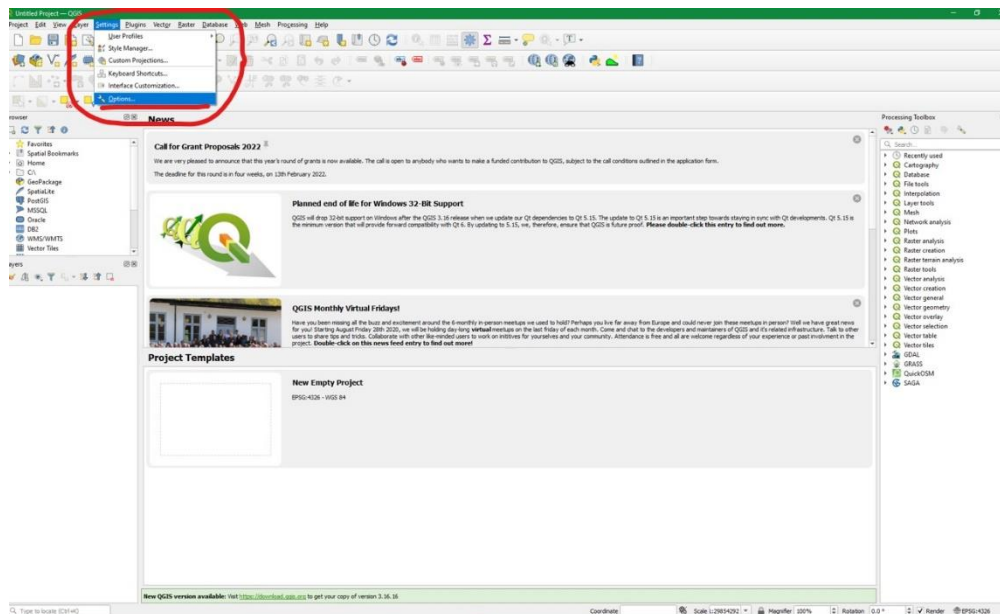

2. Getting started – Switch to English

It is recommended to change the language to English. Why? Simple answer: If u have any problems most answers will be in English and use English words for the toolbar, buttons and so on.

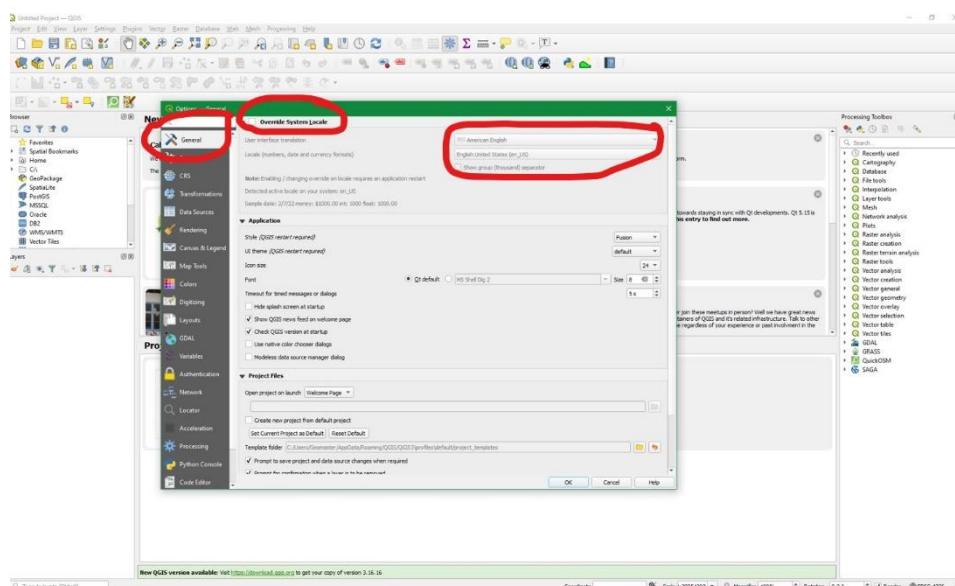

After the program is installed properly start it.

Go to “Settings” (should be “Einstellungen” in german)

Select “Options”

Now select “General” (see picture below)

Mark “Overwrite System Locale” (this would not change your System (Windows at all))

Select “American English” en_US.
